# Toronto

## City of Striking Contrasts

By Joan S. Petty

Characterized in a word or two, Vancouver would be “natural beauty,” Montreal “French heritage,” and Victoria “beautiful gardens.” A single word for Toronto would be “contrasts,” two words, “striking contrasts.”

Unlike those magnificent natural settings in British Columbia, Toronto’s distinctive features are mostly manmade. And although rich historical tradition permeates this, the capital of Ontario, that tradition is British, not the French so prevalent in Quebec. Fascinating remnants, reminiscent of earlier times, blend harmoniously with newer sophisticated elements into an exciting cityscape, a dynamic character that is further exhibited in the lifestyles of the residents.

Victorian structures nestle in the shadows of steel and glass skyscrapers. Streetcars augment modern subways to provide excellent public transportation. Flourishing ethnic neighborhoods contribute to the colorful cosmopolitan atmosphere. Of all Canadian cities, Toronto most resembles the major metropolitan centers of the United States, but evidence of its British heritage is ever present—in the street names (Queen, King, Parliament, Earlscourt), the soberly dressed businessmen dining in dignified restaurants, and the nannies pushing prams in the parks.

Toronto is Canada’s financial, industrial and cultural heart, and an ocean port, thanks to the St. Lawrence Seaway. Glassy gold and silver buildings by modern masters such as I. M. Pei and Mies Van der Rohe dot its ultramodern face.

Magnificent views abound—of the skyline from the harbor, of the city from a restaurant in the sky. Zoos, amusement parks, restored Indian villages, an authentic castle, and a marvelous science center provide endless hours of family activities. In addition, there are parks begging “please walk on the grass,” professional sports, world-renowned exhibitions, winter skiing, summer sailing as well as theaters, galleries, museums and shops carrying imports from all the British Empire and beyond.

Striking City Hall, with its high crescent-shaped towers, domed amphitheater, and arches soaring over the reflecting pool breathtakingly illuminated at night, dominates Nathan Phillips Square. From the 27th-floor observation deck the impressive panorama extends up to 100 miles. The square below bustles with ice skaters in winter; concerts, political soapboxers with noontime brownbaggers in summer.

The Canadian National (CN) Tower, the most famous landmark, stands out in every skyline view. A glass elevator ascends past radio and television stations in this, the tallest free-standing structure in the world, up to a revolving restaurant and observation decks equipped with zoom lens peritelescopes.

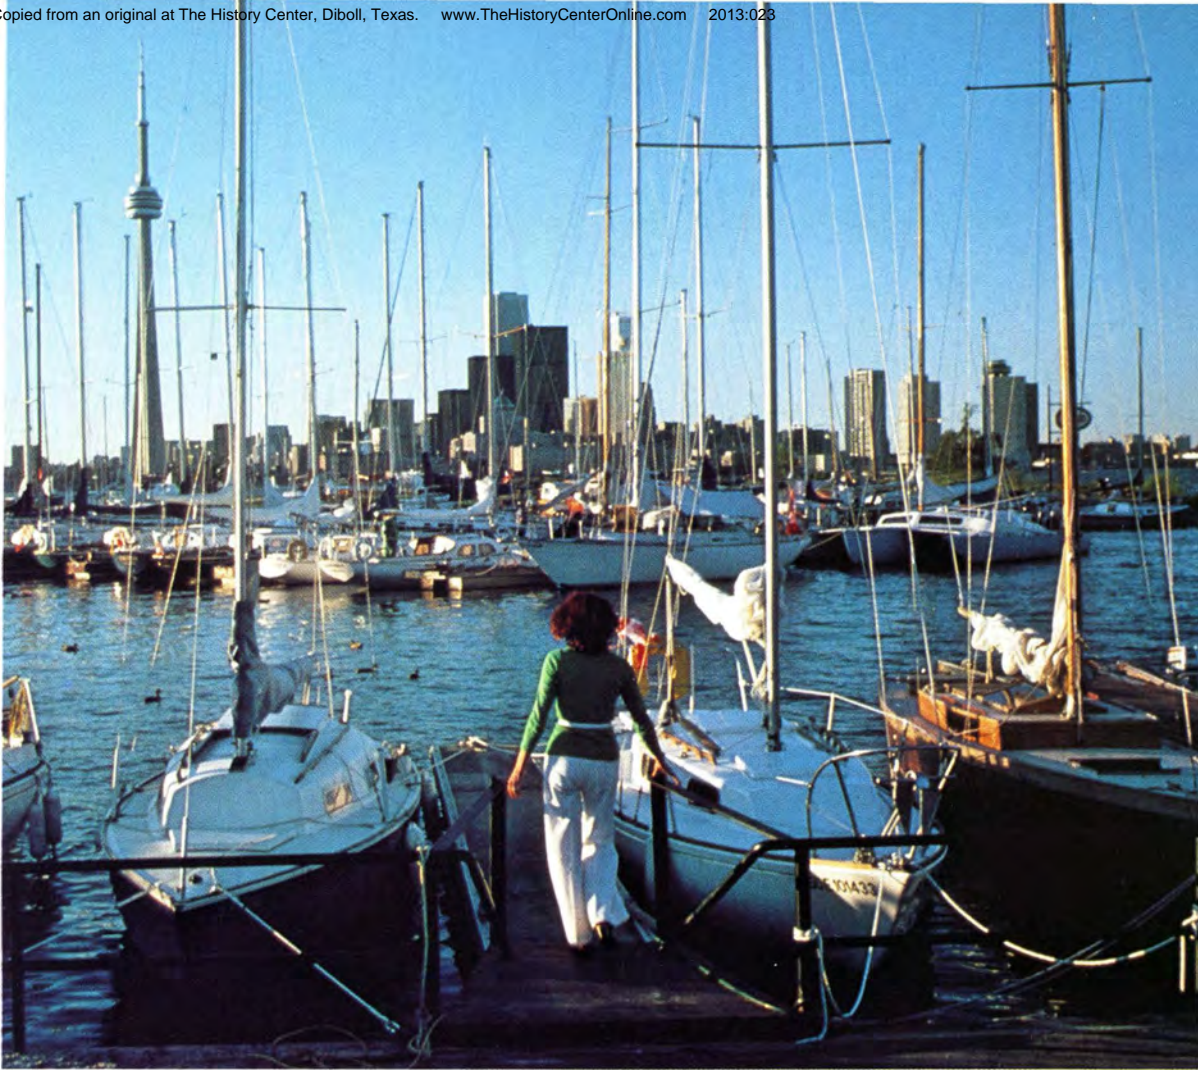

**Above, Ontario’s Victorian-Romanesque Parliament buildings preside over Queen’s Park; Opposite page, top, Every skyline view of Toronto features its most famous landmark, the Canadian National Tower; Bottom, With its high crescent-shaped towers, domed amphitheater and arches soaring over a reflecting pool. Toronto’s City Hall is a striking edifice.**

Photos by Ontario Industry & Tourism

Top, From a yacht harbor, Toronto's impressive skyline beckons a visitor to take a closer look; Bottom, Ontario Place, a futuristic fun center, occupies a 96-acre complex.

Distinctly different, Ontario's Victorian-Romanesque Parliament Buildings—stately pink edifices—preside over Queen's Park. In addition to the legislative sessions, open to the public, there are exhibits and guided tours.

Black Creek Pioneer Village depicts an early 19th-century farm community complete with poultry and oxen. Costumed villagers carry out daily tasks from yesteryear—grinding flour, making brooms and shoeing horses.

Ontario Place, a futuristic fun center, contrasts sharply with those reminders of days gone by. Within the 96-acre complex are an imaginative playground, a marina, sandy beaches, lawns, shops and restaurants. The spectacular Cinesphere theater projects mammoth images on a six-story curved screen. Top stars and big bands perform in the Forum, an immense outdoor amphitheater.

Part of the fun at Ontario Science Center comes from participation in demonstrations involving everyday matters as well as things like formation of glaciers and advanced space technology. Visitors are invited to touch and feel as, for instance, static electricity stands their hair on end.

Public parkland, in excess of 7000 acres, ranges from greenhouses full of tropical plants at Allen Botanical Gardens to countless nature trails, duck ponds, boating and picnicking facilities. Grandest of all is Toronto Islands, a four-mile strip of islands in Lake Ontario, reached by an exciting ten-minute ferry ride. There are a lighthouse with a ghost, a puppet theater, a pony ride and a children's farm plus all the standard facilities.

The Royal Ontario Museum's fine collections of natural history, Chinese art and archeology attract museum enthusiasts. This museum, Canada's largest, houses everything from dinosaurs to Egyptian mummies. At adjacent McLaughlin Planetarium, star-gazers recline to marvel at the wonders of the universe.

Markham Village, a quaint Victorian street of brightly painted buildings and gas lamps, bursts with galleries, antique shops, boutiques and restaurants, as do the renovated townhouses of Yorkville. Carved ivory statues and delicate china dolls are found among authentic pagodas at China Court. A gaudy spectacle is presented as residents reflecting many cultures buy their favorite foods amidst the bustle of Kensington Market.

It's a wonderful place, this Toronto. Nothing else is quite like it. Bold and many-faceted, it offers a great deal to visitors of all ages and interests.

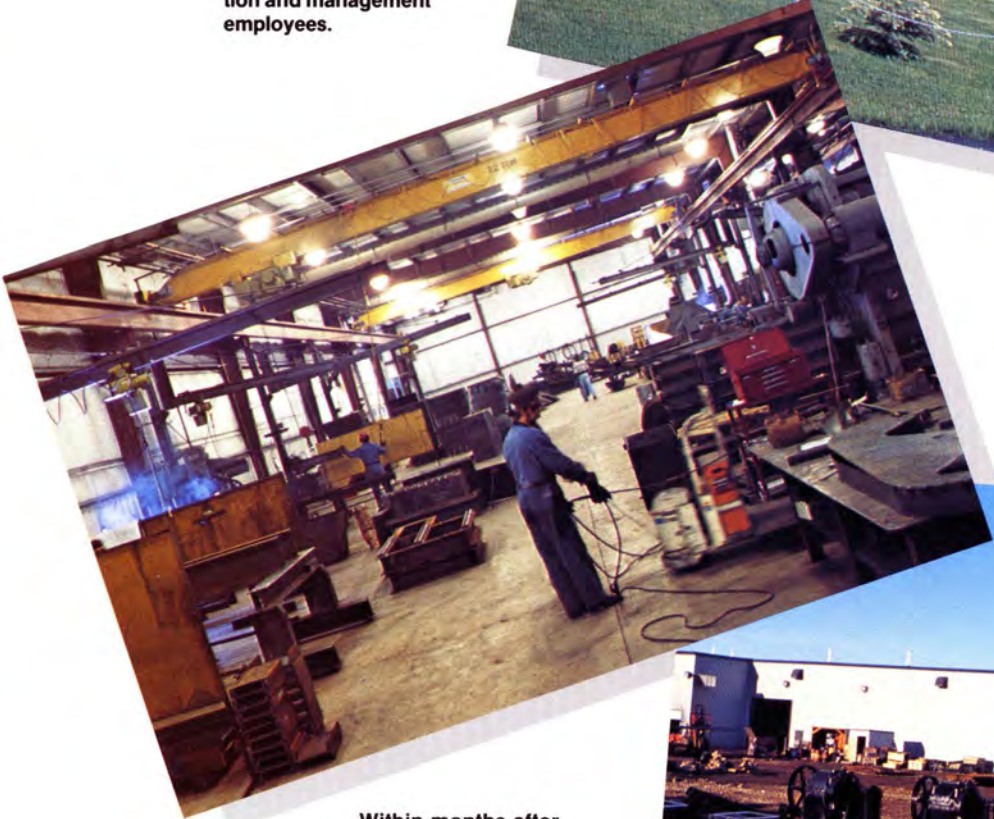

**(Right), Top, Mariposa Folk Festival is an exciting event on Toronto Islands, a four-mile strip of island in Lake Ontario; Bottom, Costumed villagers depict an early 19th-century farm community at Black Creek Pioneer Village.**

# LUFKIN

Right, LUFKIN's plant in Nisku Industrial Park near Edmonton, Alberta is fabricating structures for seven sizes of pumping units. Below, the plant provides employment for 40 production and management employees.

Within months after production began in the new plant, it was necessary to add a 7000-foot, three-bay expansion.

# EXPANDS INTO CANADA

Lufkin Industries, Inc. recently opened a new 22,000-square-foot manufacturing facility near Edmonton, Alberta, Canada, in the Nisku Industrial Park. Named Lufkin Machine Company, Ltd., the two-million-dollar plant resulted from increased demand and volume of sales of LUFKIN equipment in Canada. Savings on transportation costs and export duties also made the facility advantageous.

The building was occupied in October, 1979, and the first structure was completed in March, 1980. Several months were required to move in, buy new machines, and transfer equipment from the Lufkin plant. In addition, all jigs and specialty fixtures were made in Canada.

The plant's production machines include welders, iron workers, a brake press, a shear, a shape burner, welding positioners, and other specialized equipment. Most of the steel used at this facility is purchased from Canadian steel mills, and a local foundry casts the counter-weights for all of the Canadian-built units.

At present, "structures for seven sizes of LUFKIN pumping units are being fabricated at our Canada facility," says Elton Fenley, manager of manufacturing. "Also, prime mover bases, tie downs, belt covers, and crank guards are built here for all except the largest LUFKIN units destined for Canada."

Almost before the management and employees settled into the new facility, there was a need for expansion.

"With the completion of a recent 7,000-foot three-bay expansion, we are starting to machine some parts here and soon will have a repair facility for units in the field. Some 3,000 square feet is devoted to stocking spare parts," added Fenley.

During the first year of operation, the Canada plant built and shipped about one-third of LUFKIN's total Canadian sales.
