

BULLETIN No. 45

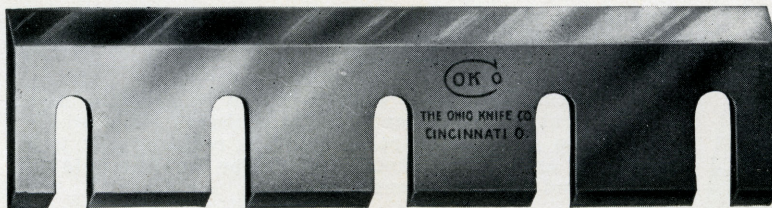

Hog and Planer Knives

HOG KNIVES—Both Solid and Laid Steel

We carry knives in stock to fit any size or make Hog, both in solid and laid steel.

We are also headquarters for throat plates and anvil plates for the various makes of hogs.

OUR O. K. HIGH SPEED
STEEL KNIVES

Our Planer Knives are accurately end balanced—because they are evenly ground, both as to thickness and width, and the *slots are machine cut*, with means that exactly the same amount of steel is removed to make each slot. Then, the way we work the steel in these knives combines toughness and strength with great depth of hardness. This gives the knives a keen-cutting edge.

Our stock of High Speed Steel and Slotted
Planer Knives is complete

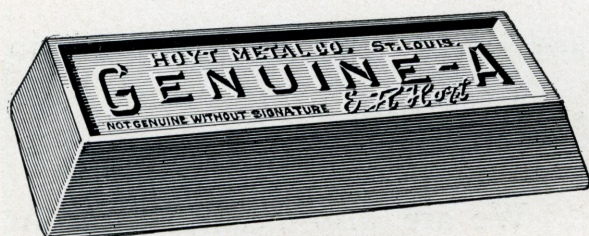

BABBITT METALS OF MERIT

(MADE FOR US BY HOYT METAL CO.)

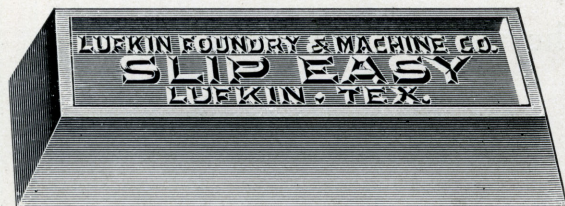

LUFKIN SPECIAL GENUINE

This metal is made by a formula perfected after years of careful experimenting by one of the largest builders of high grade machinery with every degree of success and is recommended to stand up under great pressure and high speed. We guarantee it to give absolute satisfaction.

HOYT'S "A" GENUINE

This metal is too well known to need comment. Suffice it to say, that when you buy it you are getting a metal of the highest grade with a big reputation behind it.

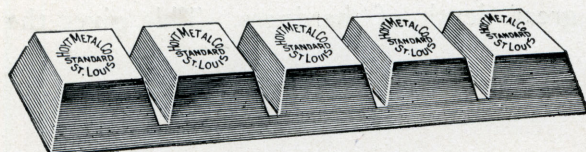

LUFKIN "SLIP EASY"

"Slip Easy", as its name would imply, is a high grade Anti-Friction Metal at a moderate price. Its ingredients are so proportioned to make it a highly anti-friction and free flowing metal, suitable for high speed and hard service. This metal will give satisfactory results in nine cases out of ten where genuine metal has been used. We sell it under a guarantee that it will give satisfaction which can be easily sustained by giving us a trial order.

LUFKIN TRANSMISSION

A carefully made alloy that will be found to give excellent results in general transmission work where not too great pressure of steam is required. It is a highly anti-friction metal, and will be found to hold oil well and give good general results.

HIGH GRADE NUMBER FOUR

We have found that there are many grades of "Number Four", originally supposed to be the skimming from the Genuine Metals, yet every "Scrap Dealer" who makes no other metals has a "Number Four", mostly poor pot metal, and he makes a handsome profit selling it just under the market of a Genuine Skimmed Metal.

Modern Babbitt Metal is heated with gas to an even temperature and mixed by machinery, so that very little oxidization takes place. Consequently, there is very little "skimming" to take off. We, therefore, in buying our metal only get the skimmings or dross in proportion to the Genuine metal we purchase, so if you want "High Grade Number Four", we can serve you.
